

## Common Pearl Bush

*Exochorda racemosa*

Height: 12 feet

Spread: 10 feet

Sunlight:

Hardiness Zone: 4b

### Description:

A beautiful large shrub prized for its showy white flowers in early spring and curious pearl-shaped flower buds, recedes into the background the rest of the year; benefits from an occasional pruning to keep it looking its best

### Ornamental Features

Common Pearl Bush features showy racemes of white flowers along the branches in mid spring. It has green foliage throughout the season. The oval leaves do not develop any appreciable fall color. The fruit is not ornamentally significant.

### Landscape Attributes

Common Pearl Bush is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Common Pearl Bush is recommended for the following landscape applications;

- General Garden Use

### Planting & Growing

Common Pearlbush will grow to be about 12 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type, but has a definite preference for acidic soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America.
